

33rd Annual Production Sale

THURSDAY • MARCH 11, 2021 • 1 P.M. (CDT)

At the Farm - Located 1/2 mile North of Tripp

# SELLING

69 Registered Yearling Angus Bulls & 40 Purebred Angus Heifers

# Mogck Angus Farms

# Welcome

Dear Friends,

The Mogck family invites you to attend our 33rd Annual Production Sale on March 11th at our farm North of Tripp. We will be selling a deep set of highly proven Angus genetics which will include 69 head of registered yearling Angus bulls along with 40 open replacement Angus heifers.

Most of the bulls selling this year have been genomically enhanced to ensure that you have the most reliable data in order to make the best decisions for each of your operations. As you study the numbers, you'll notice that about 2/3 of the bulls are suitable for heifers. Low maintenance calving is very important to us and we strive to provide seedstock that will accomplish the same for our customers.

Again this year we have several bulls selling that are the result of a progressive embryo program. We've been utilizing embryo technology & science since the very beginning and many of the dams & grandams are the result of this work; we are committed & have been for 3 decades to replicating the top proven cows in our operation. Its always been a goal of ours to provide a product that is unique & 1 of a kind to the Angus breed. Many of the bulls & heifers have pedigrees unparalleled; providing you with both outcross genetics as well as a bull or heifer that is exclusive to both your herd & farm.

We will be serving a beef lunch and would love for you to join us on March 11th; our sale will also be broadcast online via DV Auction if you're more comfortable bidding from home. Stop by anytime prior to sale day to evaluate the bulls in person; we're happy to answer questions and give our recommendations. Finally, we wouldn't be able to do what we love without you, our customers & cannot express enough gratitude for supporting our program for the last 32 years. Take care and we'll see you sale day!

Sincerely, The Mogck Family

SELLING -69 Yearling Angus Bulls &

**40 Replacement Angus Heifers** 

(sell as commercial in groups of 5 head)

#### **SALE LOCATION** 1100 North Main Tripp, SD 57376.

From the intersection of Hwys. 37 & 18, we're 1-1/4 miles east on Hwy. 18. And our farm is 1/4 mile south as you come into Tripp. We're located 35 miles south of Mitchell, SD and 45 minutes north of Niobrara, NE. Many hotels/ motels available within 35 miles; please give us a call for recommendations.

**VOLUME DISCOUNT** 2% on 2-4 bulls, 5% on 5 or more bulls

**HERD HEALTH** All bulls will be semen tested and tested negative for BVD prior to delivery. We also execute a comprehensive calfhood vaccination program throughout the season. For guestions, call the "Cattle Team" at Northwest Vet or Dr. Greg Ver Heul of Sioux Nation in Viborg. Heifer Health – Dr. Shawn Bietz – Neighborhood Vet Care

**DELIVERY** Free delivery within 300 miles or central points. \$100 discount if picked up within one week of the sale. We will help coordinate affordable trucking for all other long distance deliveries.

**BREEDER'S GUARANTEE** Mogck Angus Farms guarantees all bulls selling for \$3,000 or more against breeding injury for the first breeding season. Breeding season is defined as the 90 day period following the first turnout of the bull(s). If a replacement is available, he will be provided, or if a buyer prefers, credit towards one bull will be given in the following year's sale, less salvage value of \$1,750. \*Death of the bull is not covered and we recommend the purchase of livestock mortality insurance to cover this type of loss.

**INSURANCE** We recommend the purchase of bull mortality or loss of use insurance and a representative with Martin Trudeau Agency (605-770-5170) will be available sale day.

**SEMEN INTEREST** Mogck Angus will retain 1/3 revenue sharing semen interest on all bulls in the sale. Buyer will retain full possession & full salvage value.

STORM DATE To be announced on radio stations KMIT 105.9 FM and KOOL 98.3 FM along with our website.

TERMS & CONDITIONS Cattle will sell under the suggested Terms and Conditions of the American Angus Association (http://www.angus.org/Pub/ suggested sale terms.pdf).

**ANNOUNCEMENTS** Announcements made from the auction block on sale day will take precedence over printed material or any form of advertisement.

**LIABILITIES** All persons who attend the sale do so at their own risk. The seller assumes no responsibility for any accident that may occur.

SALE DAY PHOTOGRAPHY Nicole Suurmeier — Scotland High School Photography Class

**BULL PICTURES** Steph Kaufman & Justin Mogck

EPDs contained in the hard copy of this sale book were current as of print date. - This bull is the complete package and has us excited for his future. Super powerful, he stands on a big foot with added bone; yet he's smooth shouldered and offers tremendous calving ease.
- 2nd highest weaning weight with a double-digit CED, massive ribeye and a bull that ranks near the top of almost every EPD category. His dam has a birth ratio of 5/98 and a weaning ratio of 5/107.

• Heavy muscled National son with plenty of "get up and go" in terms of growth. He represents the type of efficient, easy fleshing, easy feeding cattle that are in such high demand right now. His 4 year old good looking Vision Unanimous dam is off to a great start weaning 2 calves on a 112 ratio and appears like she'll be walking our pastures for a number of years.

• We think this well balanced National son will work well on heifers. He's the #1 weaning weight EPD bull in the sale and ranks extremely high in a number of important EPD categories. His Insight dam has a BR of 3/97.

• Here's a Playbook x Whitlock that very few bulls out there can match for his combination of calving ease, growth & maternal traits.

# Watch & bid online for FREE at

Buying online is as easy as 1, 2, 3...

- Create an account at www.dvauction.com under the "register" tab
- 2. Apply for bidding approval by clicking on the "details" tab at least 24 hours prior to the auction-a DV representative will notify you once you have been approved
- 3. Tune in for the sale and make you purchases!

After the sale, contact the sale manager or owner to arrange transportation and payment. High speed internet is required for successful bidding-be sure to check the lag-time monitor in the top left corner to ensure real-time broadcasts.

Proxy Bidding-if you can't make time to watch the sale, register a proxy bid and let our system represent your bid while you're away. Look for the "proxy bid" tab on the auction listing, and fill in your maximum bids. We'll handle the rest!

Having troubles? During the auction, you can type a message to the operator at any time for assistance. Our full-time support team can also always be reached at (402) 474-5557.

• This bull has done well for himself considering his Confidence dam was struck by lightning early this summer. None of the bulls in our sale received creep this summer and this guy barely had much growing time on milk either. Grass and good genetics brought him along; his mother has a BR of 5/90 and a WR of 5/106.

- Here's one of the more striking and visually impressive bulls we think you'll run across this sale season. His full brother from last year was one of our high sellers and boy is Brian happy he bred this bull's Sure Deal dam back the exact same way. He is smooth and extended up front where you want it to be but wide & explosive everywhere else.
- His sire is Stunner and we think this one's a jaw dropper himself.

• There is a reason every Stunner bull in the sale is pictured; they are super good! No need to run this guy across the scale to know he's built like a slab of concrete. Long, deep bodied and big & bold through his middle; he is very well balanced. His Pathfinder Dam out of War Party has a nursing ratio of 7/107.

Maternal brother to Lot 22 that sold in 2020.

Larry Hebbert pictured with Clyde Kepplinger at the 2020 sale. Larry passed away this past year and will be deeply missed by everyone involved with Mogck Angus Farms. He was family, he was a life long customer and he was a well respected cattleman by everyone that knew him.

• Full sib to the popular Blackhawk/Prowler flush brothers that headlined our 2020 sale. We had a few embryos remaining and this was the only bull calf but one that we are very high on. Early reports from those that purchased his brothers last year are very positive when it comes to both calving ease & calf vigor. We have several full sib sisters just entering the production phase and we are excited to see what kind of mothers they are going to be. Our 223 Prowler sired donor dam ratios 7/100 at birth & 7/103 at weaning.

MAF Armory 85 - The \$13,000 3/4 brother to Lot 40 and co-high selling Lot 1 Armory son from the 2019 sale.

MAF Viper 925 - Full brother to Lot 40.

• Lots 45 & 46 are the result of separate flushes with our Pure Product donor cow with this bull sired by Payweight 1682. Payweights continue to get it done across the nation with both his sons & daughters. We have a full sister to this bull that is currently in production and has all the pieces to be considered a great cow someday. Keep back all of his daughters, this is as maternal of a bull as we think you'll find. The bull himself is extra long bodied, deep in his flank while big & bold through his midsection.

MAF Payweight 017 - Lot 45

## **CALVING EASE STAR DESIGNATIONS**

Our bulls have been sorted into four groups pertaining to their calving ease.

• These 5 Watchout 2546 sons will be the last 5 to sell for Mogck Angus and oh my are we tickled with this set. Out of a Capitalist daughter that has a nursing ratio of 5/101, this bull is one impressive specimen. Wide from behind, square made and elevated out of his shoulder, we see this bull used by both club calf producers as well as commercial cattleman looking to inject phenotype into their herd.

Campbell & her class winning Bismarck heifer at the 2020 SD State Fair Jr. Show

# YOU'VE DONE THE WORK.

Get paid for it.

You've invested in good genetics. You've kept all the records.

AngusLink<sup>SM</sup> combines USDA Process
Verified Programs with a Genetic
Merit Scorecard that gives buyers
confidence in your calves.
From age and source verification to
cattle care and handling, you choose
which programs make the most
sense for you.

Group Age & Source: Verifies the group age and source of the cattle

Angus-Sired Genetics: Verifies calves are sired by 100% registered Angus bulls

Non-Hormone Treated Cattle: Verifies cattle have never received hormones

NeverEver\*: No antibiotics, no hormones, no animal by-products ever

Cattle Care & Handling: Documents proper management, demonstrates quality commitment

Calf Management: Documents preventative health program

Genetic Merit Scorecards: Measures the genetic merit of calves for feedlot performance and carcass merit. \*Optional, not part of the PVP claims

Easy and affordable, our customer service representatives walk you through the process.

# **ANGUS**LINK\*

VALUE ADDED PROGRAMS

#### AAA Selection Tools

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Accuracy (ACC), is the reliability that can be placed on the EPD. An accuracy of close to 1.0 indicates higher reliability. Accuracy is impacted by the number of progeny and ancestral records included in the analysis.

#### **GROWTH**

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Residual Average Daily Gain (RADG)**, feed efficiency expressed in pounds per day, is a predictor of a sire's genetic ability for post-weaning gain in future progeny compared to that of other sires, given a constant amount of feed consumed.

**Dry Matter Intake (DMI)**, expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the post-weaning phase, compared to that of other sires.

**Yearling Height EPD (YH)**, is a predictor of a sire's ability to transmit yearling height, expressed in inches, compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

**Docility (DOC)**, is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves.

#### MATERNAL

**Heifer Pregnancy (HP)**, is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

**Calving Ease Maternal (CEM)**, is expressed as a difference in percentage of unassisted births with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Herds (MkH)** indicate the number of herds from which daughters are reported.

**Mature Weight EPD (MW)**, expressed in pounds, is a predictor of the difference in mature weight of daughters of a sire compared to the daughters of other sires.

**Mature Height EPD (MH)**, expressed in inches, is a predictor of the difference in mature height of a sire's daughters compared to daughters of other sires.

**Cow Energy Value (\$EN)**, expressed in dollars savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses).

Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

#### **CARCASS**

The genetic evaluation produces a single set of EPDs for carcass weight, marbling score, Ribeye area and fat thickness. The units of measure are in carcass trait format and analyzed on an age-constant basis.

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

#### **\$VALUE INDEXES**

\$Value indexes, are multi-trait selection indexes to assist beef producers by adding simplicity to genetic selection decisions. \$Values are reported in dollars per head, where a higher value is more favorable. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

**Maternal Weaned Calf Value (\$M)**, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle. **Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk, and mature cow size.

**Feedlot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning and carcass value compared to progeny of other sires.

**Combined Value (\$C)**, expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index are: CED, CEM, WW, YW, Milk, HP, DOC, MW, Angle, Claw, DMI, Marb, CW, RE and Fat.
